WORLD CALENDARS AND CONTINUED FRACTIONS

FREDERIC LATOUR

CENTRAL CONNECTICUT STATE UNIVERSITY

<u>Abstract</u>: Throughout history, humankind has developed a large number of different calendars, most of which fall in one of three categories: solar, lunisolar, and lunar. Solar and lunisolar calendars often involve the number 19 somewhere in their calculations. The purpose of this talk is to give a mathematical explanation for the importance of that number, using the concept of continued fractions. No prior knowledge of continued fractions will be assumed.
