**DEPARTMENT OF MATHEMATICAL SCIENCES**

# **COLLOQUIUM**

**Friday, February 9, 2007**

**2 – 3 PM**

**Maria Sanford, Room 101**

## **Some Statistical Pedagogy for First Semester Statistics**

**ROGER BILISOLY**

**CENTRAL CONNECTICUT STATE UNIVERSITY**

**ABSTRACT**

Although statistics heavily uses mathematics, these two subjects do have important differences in both the problems they consider and the approaches they take. These differences suggest that there should be differences in the classroom, too. This talk will discuss how I approach teaching introductory statistics and will include many examples, including classroom demonstrations and online drill questions that I have written.

The level of this talk is the same as the level of first semester statistics, so it should be understandable to all.
