FOSTERING COMMUNITIES IN PRACTICE

MELISSA GUNTER

CENTRAL CONNECTICUT STATE UNIVERSITY

Abstract: Learn about a community-building framework used by three mathematics educators in their different contexts to foster real-time, meaningful community among students. These classroom communities serve as the foundation for belonging, learning, and professional growth for their students but doesn't occur by magic! Specific strategies and ideas will be shared in the hopes that other practitioners of mathematics and mathematics education may envision how purposeful community building can bring positive change to their own classrooms.
